

# THORN

## Oracle

High performance street and road lighting in a timeless design

## More than a vision

Few aluminium lanterns can combine such a high degree of advanced performance and modern styling as the Oracle. Its precision optics deliver better lighting to the designer, the road user and local residents. Whether it's a major traffic route or minor street, Oracle offers minimised installation and maintenance costs and maximised energy savings.

- Versatile in performance, timeless in design and impressively flexible in the variety of optical combinations available, Oracle has the added advantage of being able to incorporate future innovations in light sources and associated controls
- In two sizes, with a power range from 50 to 600 watts, the lantern can be used successfully - either post-top or side entry mounted - in a wide range of applications
- A choice of three optics, Access, Wide and Comfort for improved visibility and reduced obtrusive light
- Wide and Comfort optic versions feature the Optibloc® system for extended maintenance cycles
- Choice of 25 lamp options and first class, energy efficient gear components
- The die-cast aluminium body and high quality materials ensure durability and recyclability
- Fully complies with the WEEE RoHS requirements
- Oracle's design is simple and efficient and includes a number of subtle features which make it vandal proof, vibration proof and suitable for use in harsh environments

## Purity, simplicity and long life

Road and street lighting demands more than just the functional supply of light to enhance vision. There is also the need to incorporate the lighting into the design of the urban setting.

The designers of Oracle made no compromise between function and aesthetics in the quest for better lighting.

The curved shape of the Oracle luminaire, which is available in two sizes, offers a distinctively pure and timeless design which integrates easily in a variety of environments.

- This simple design will not date, increasing the life time of your luminaires
- A choice of glass or polycarbonate enclosures with flat or shallow profiles offers versatility in lighting performance
- Various mounting options for post-top or side entry allow choice of appearance
- Luminaire finished in hardwearing powder coating in aluminium grey (RAL 9006) to complement existing installations. Other finishes available to order

A range of dedicated column packages have been designed to compliment the pure and simple design of the lantern.  
(See page 11 for more details)

### What are the benefits of aluminium?

Aluminium is a supreme material for the construction of luminaires as it will last significantly longer and has greater U.V. resistance than most construction materials, increasing luminaire life and reducing the amount of maintenance needed.

It is resistant to harsh outdoor conditions including wind, water and pollution and it also offers good vandal resistant qualities in a well designed fitting. Aluminium is easy to dismantle and recycle.

# Applications

The flexibility of the Oracle range ensures its suitability in a wide variety of street and road lighting applications because versatility is key to better lighting

- Wattages ranging from 42-600W to address road applications from residential to motorways, through intercity links, car parks and country roads
- All of the latest lamp innovations for road lighting are available in the Oracle range to provide improved ambience and visibility
- Two sizes available to help achieve visual consistency at different mounting heights from 5m to 16m
- Shallow enclosures, offering medium cut-off or flat glass, providing sharp cut-off, give the right light performance for particular project requirements
- Glass enclosures provide extra translucency whilst polycarbonate is more durable for use in residential areas
- Shallow enclosures in both materials have exactly the same profile to allow visual consistency when mixed in a single project
- Road lighting packages can include lighting management and dimming for energy saving during low traffic periods

# Energy savings and the environment

Oracle has the right balance between lighting requirements and impact on the environment

## Obtrusive light

Obtrusive light is a growing issue today. Poorly designed or installed street lighting can allow a significant proportion of the light to be emitted above the horizontal. We have used our years of experience and know how to develop light engines that include high performance and innovative reflectors, precise lamp settings plus a choice of enclosures. This allows light to be directed to exactly where it is required taking into account the surface and the project characteristics.

Hence when designed with shallow glass bowls, a minimum quantity of light is emitted above the horizontal. And even when using the flat glass solutions horizontally, the light reaches only the surface where it is needed i.e. on the road resulting in no upward light.

Light control is not just a question of where but also when. The Oracle range also offers a wide variety of solutions to control and reduce light wastage.

Flat glass enclosure option for sharp cut-off of the light distribution

Polycarbonate shallow enclosure with frosted front, rear or both available on request

## Did you know?

250W street lamp lit for 7 hours (during the hours of darkness) can single-handedly produce up to one tonne of CO<sub>2</sub> in a year.

Oracle offers the very latest in lamp technology from sodium to metal halide through to fluorescent to help with the reduction of unnecessary CO<sub>2</sub> emissions.

At Thorn we are committed to enhancing quality of life and conserving our natural environment which, at the same time, has the effect of reducing energy costs

### Energy savings and the environment

In a world where energy resources are becoming a major issue and capital costs need to be low, Oracle offers the perfect solution.

#### Energy savings

- Engineered optical engine: with its flexible optics Oracle can be adapted to the special demands of any project
- Reduced lighting points: DLOR and spacing have been optimised for savings in initial expenditure and future maintenance costs
- Photocell options: with a Nema socket or a complete minicell offered as standard, Oracle provides a simple autonomous and cost efficient way of controlling the light installation
- First class gear components: selected for their longevity and low energy loss, no compromise has been made on conventional and electronic devices
- Electronic benefits: electronic ballasts are widely known for their ability to burn less energy and to offer longer lamp life including the opportunity to save on maintenance costs. Oracle offers a wide choice of reliable solutions for HID and fluorescent lamps
- Dimming features: are available for both standard wire wound and electronic gears without the need for an extra control line. Not only can you achieve direct savings but Oracle's dimming function provides a minimum light for safety without altering the colour of light while preserving the uniformity which is essential for perfect visibility
- OLC system: provides intelligence to the luminaire enabling it to communicate with a central terminal for immediate reporting of failure to minimise 'down time' and prevent time consuming visual checks
- New light sources: Oracle is ready to incorporate tomorrow's innovations in light sources, for example the introduction of the new CosmoPolis lamp and reduced cost of energy consumption

### Sustainability

Oracle has been designed to comply with the WEEE and RoHS requirements. When the luminaire is decommissioned at the end of its life the majority of its components are recyclable. Consequently the aluminium, glass and plastic parts can be entirely re-used.

Gear tray and fluorescent electronic ballast

Gear tray and powerswitch system

### What are RoHS and WEEE?

#### RoHS (Restriction of Hazardous Substances)

Is the European Union's directive on the restriction of the use of certain hazardous substances such as Lead or Mercury in electrical and electronic equipment.

#### WEEE (Waste Electrical and Electronic Equipment)

Is a directive requiring the collection and treatment of electronic and electrical equipment (EEE) at the end of the products life. With the objective to preserve, protect and improve the quality of the environment, protect human health and utilise natural resources prudently and rationally.

While closely related, RoHS and WEEE deal with different parts of the product life cycle. RoHS seeks to reduce the amount of hazardous materials entering electronic products while WEEE deals with reducing the amount of electronics entering landfills. RoHS is the beginning, and WEEE is the end.

## Materials and standards

Oracle's body exploits the benefits of quality materials for sustainability and a contribution to a healthy and comfortable environment

### IP66

Oracle is a future proof lantern that offers IP66 protection against ingress of water or dust. This is achieved by a strong oversized neoprene gasket that ensures ingress protection between body, canopy and a breathing system that allows cooling and air circulation.

### IK08 or IK10

It is a common misunderstanding that the shock resistance rating is given by the enclosure. While the materials used for the visor is considered it is the total fitting that has to be assessed. Often the weakest part of the fitting is not the enclosure but the hinges, clips or the gasket area. Within Thorn all shock resistance tests are carried out before the IP tests to ensure that the product design first satisfies IK.

### CL1 or CL2

Oracle offers both possibilities with either a polypropylene or galvanised steel gear plate. All wiring is then designed towards the earth connection or double insulation.

### Wind Resistance

Oracle's lines have been designed to offer as little resistance to wind as possible so that columns do not have to be oversized.

Oracle size1:  
0.058 with shallow enclosure  
0.067 with flat enclosure

Oracle size2:  
0.073 with shallow enclosure  
0.083 with flat enclosure

### EN, CE, ENEC

Our product design and technology exceed the standards.

### What are ENEC, CE and EN-605998-2-3?

#### ENEC:

European Norms Electrical Certification. The ENEC certificate gives the certainty that products offer 'European-level' safety which has been officially verified by an independent testing and certification body.

#### CE is a marking that:

- Indicates a product's conformity with the 'essential requirements' of the directives
- Allows products to be 'placed on the market'
- Ensures the free movement of goods
- Allows the 'withdrawal' of non-conforming goods by Customs

#### EN-605998-2-3:

This is the harmonised European standard for light fitting design and especially the electrical safety.

1.

3.

4.

5.

6.

2.

1. Breather filter ensures circulation of air inside the gear compartment for cooling of the components and extra longevity while preserving IP66.

2. The gear (CLII and CLIII) is pre-drilled to be fixed to the body by two screws for areas with high vibrations like tramway lines or bridges.

3. Oracle's lines have been designed to offer as much wind resistance as possible so columns do not have to be oversized.

4. Two screws and bolts are used to secure the fitting through the integrated rotating spigot to the bracket or the column offering extra vandal resistance.

5. Shaped Nema socket gasket in silicon follows the contours of the canopy to create an IP66 seal.

6. IP66 optic and gear construction for full protection against water and dust.

# Ergonomic Design

The Oracle designers have taken time and consideration to ensure that what's outside the product reflects what's inside to provide a consistent intuitive design

## External

Within simple lines Oracle offers intuitive accesses and an understandable layout. The fixing spigot is instantly visible and there is one single entry point to get inside the luminaire.

## Internal

Smaller lanterns do not necessarily make for a friendly internal design, this can often be complex with little room for manoeuvre. Oracle optimises its internal space by clever layout and clear understandable positioning.

- You can gain access from above and each side for a safe working position
- Divided into three separate compartments to offer space, easy access and to allow for future evolution
- Plug and socket systems have been generalised
- Leads are fixed
- Cabling is colour coded
- All areas which have to be handled have been designed for ease of use

All these features combine to make simple, safe and friendly lighting.

## Dedicated brackets

Simply designed brackets and columns to complement the urban setting

A range of exclusive column and bracket packages has been created to enhance the simple and pure shape of the lantern and provide a stylish appearance from ground to sky.

- Constructed from robust materials to the very latest standards
- Single or twin arm brackets available for post-top use as well as intermediate or wall mounted to match any design scheme
- Brackets finished in aluminium grey (RAL 9006). Other finishes available to order to provide a match with urban furniture by day

# Performance

A choice of three efficient optics (Access, Wide, Comfort) contributes to Oracle's intelligent design

Optical systems are employed in Oracle to provide the fine control that is needed to meet the environmental demands. Three optical systems deliver uniform lighting precisely where it is needed according to the lamp choice and application.

## Access or Optibloc®?

The Access optic has an IP66 rating and allows maintenance to be quick and easy with extra fast lamp changing. The Optibloc® system has a double IP66 protection to the optical engine, which allows for extension of the maintenance cycles. This is recommended for applications with extreme water or dust levels.

Self-cleaning treatment available on request for the flat or shallow glass enclosures.

- Dirt retardant reduces diffuser cleaning cycles
- Maintenance factor increases from 0.80 to 0.89
- Up to 10% savings on lamp flux

Wide choice of lamp settings ensures the lamp is positioned precisely to match project requirements and deliver better performance.

## Access Optic:

This version is for projects where the Optibloc® system and its double IP66 protection is not required. It offers direct access to the lamp and lampholder when the canopy is opened. The unique combination of the high performance reflector, multi-lamp settings lampholder and choice of enclosure make it a first class photometric performer for road and street applications.

## Wide Optic:

This version is the new generation of Optibloc®. Both the Optibloc® and the body are IP66, thus making it a double IP66 unit. While offering first class photometric performances it enables maximum spacing when TI is not the first constraint.

It is particularly suitable for refurbishment projects where the scheme is already set.

## Comfort Optic:

This is a new innovative optical development that has been designed around the EN13201 standards. It maximises comfort by meeting all TI constraints while optimising all other criteria. Also, this brand new generation of reflector operates in a much better way than all other optics, working with all metal halide and the new generation of lamps such as CosmoPolis. The white light trend is then better addressed. This optic is particularly suitable for new projects where reduced amount of energy and better visual comfort are sought.

## What is Glare and the TI ratio?

Glare is the discomfort or impairment of vision experienced when parts of the visual field are excessively bright in relation to the general surroundings.

Discomfort Glare - glare which causes visual discomfort without necessarily impairing the ability to see detail = G

Disability Glare - glare which impairs the ability to see detail without necessarily causing visual discomfort = TI

# Installation and Maintenance

The installation and maintenance operations are quick and efficient, saving time and increasing the safety of the contractor and the road user

Oracle has been designed with the contractor in mind. Each feature has been considered from the installers point of view for easy use and safety.

- With minimal use of materials Oracle is light weight and easy to carry
- The integrated rotating spigot can take a diameter of up to 60mm for side entry mounting and up to 76mm for post-top mounting without the need for additional attachments
- Simply secured with two screws and bolts to ensure the luminaire does not rotate along the column or bracket but keeps its initial position
- A single robust front clip acts as the entry point of the fitting also supplying quick release and security
- Retaining mechanism to keep canopy open even in high winds
- Access from above allows operations to be performed safely
- Luminaire is delivered complete (no lamp) to limit unnecessary handling and confusion in gear selection which then reduces installation time
- Plug and socket connections have been implemented where possible to aid the tool free installation procedure
- Wiring is comprehensive between the three sections
- Easy to achieve horizontal and vertical lamp settings, additionally the factory lamp settings have been optimised for good performances
- The gear is retained by two springs but for extra security you can use additional two extra screws for applications like bridges and railway stations
- On size two, through wiring can be realised on twin central installation by using a second cable gland thus permitting only one mains cable to be used from ground to luminaire

1.

2.

3.

4.

5.

1. Strong stainless steel clip with easy and safe releasing and securing

2. Two screws and bolts secure the fitting for its lifetime

3. Integral rotating spigot allows 34 to 60mm side entry and 60 to 76mm post-top mounting

4 & 5. Side entry or post-top easily achieved by rotating the spigot

- Oracle's self cleaning shape does not let dust settle ensuring that cleaning operations are reduced to a minimum
- Full IP66 protection ensures that components including lamp, reflector and enclosure are protected against dust and moisture for extended life span and reduced need for cleaning
- TC-TELL lamps are attached to the lampholder through a twist and lock mechanism
- Class I versions are fully earthed for safety of the installer
- Class II versions have automatic disconnection that switches off the mains once the canopy is opened
- Class II gears have a test key included to enable the contractor to do on site checks without closing the canopy
- Gear is released by two springs – no tool needed
- Gear tray has been designed with a handle for easy removal
- The lamp settings are not changed when the lamp or gear is removed, so that your original settings are maintained after an operation has taken place

With the three Oracle optics lamp and gear replacement is possible in seconds without the use of tools

#### **Wide and Comfort optics:**

The lamp/gear can easily be removed

#### **Access optic:**

Once the luminaire is open, the lamp/gear is directly accessible

  - 85-120W TC-TELI (FSMH) compact fluorescent. Cap: 2G8
- \* Remote gear tray

## Materials/Finish

Body: die-cast aluminium, powder coated grey (RAL 9006)  
 Spigot: die cast aluminium powder coated grey (RAL 9006)  
 Enclosures: UV stabilised polycarbonate or toughened glass, self-cleaning treatment available on request  
 Gasket: neoprene  
 Gear plate: galvanised steel or polypropylene  
 Reflector: high purity anodised aluminium  
 Screws: stainless steel  
 Clip: stainless steel

## Installation/Mounting

Integral tool free rotating spigot secured by 2 screws with safety bolts  
 post-top mounting: Ø60/76mm x 80mm long spigot. Tilted to 5°  
 Lateral mounting: Ø34/42/49/60mm x 120mm long spigot. Tilted to 0°  
 Cable gland for Ø8 to 13mm cable  
 Access from above to gear and optic system after quick release of the stainless steel front clip.  
 Delivered ready to install, complete with factory fitted integral gear tray, all supplied in a single carton (without lamp).

## Standards

Designed and manufactured to comply with EN 60598-2-3  
 ⚡ Class I electrical or  
 ⚡ Class II versions  
 Ta -20/+35  
 Weights and maximum windage:

## Specification:

To specify state:  
 Full IP66 aluminium road and street lighting fitting with silicon shaped gasket for photocell.  
 For 42 to 600W lamps.  
 From 34mm side entry to 76mm post-top mounting aided by integral rotating spigot.  
 Tool free access to and removal of lamp and gear tray with handle and circuit test key.  
 With options for photocells, electronic gears, dimming and lighting management system.  
 As Thorn Oracle 1 and 2.

Windage: 0.058 (shallow enclosure) 0.067 (flat glass)
