THORN

Voyager Elite

Versatile emergency
luminaire family with
outstanding performance

Voyager Elite

## A complete solution for emergency lighting

Stylish applications require stylish luminaires. With the Voyager Elite range Thorn presents you with a complete emergency luminaire family. Our range includes bulkheads, either surface mounted or semi-recessed, with or without exit sign blades. Recessed luminaires, with an optional diffuser plus exit sign blades, or a pure exit sign version. To make everything complete, a hanging exit sign allows you to choose the right luminaire type for your application.

The Voyager Elite legend range offers a choice of three viewing distances 30, 20 or 10m.

The whole portfolio is available in a choice of white or metallic silver; the surface of the curved body is lightly textured.

SelfTest or Addressable test versions make it easy for you to go for an emergency lighting solution with Explorer SelfTest, Explorer Project or Explorer Vision for hassle free compliance. Basic emergency versions are available for manual labour intensive testing.

One design throughout the whole building provides all the safety you need in times of emergency. Voyager Elite efficiently provides you with ample light in open space areas to dispel feelings of panic and guide you to the exits.

Anti-panic lighting

Emergency lighting in open areas has to provide sufficient light to avoid panic (0.5 minimum lux according to European standards)
Foyers are a typical example of an open space. During an emergency or even only a short mains failure all the people in the foyer must feel safe. If there is a need to evacuate the building, everyone must be guided safely by the shortest possible route to the nearest exit, without getting lost or tripping over.

How to use Voyager Elite:
For open space areas in a building use the bulkhead version Voyager Elite for providing anti-panic lighting. Alternatively if a room is fitted with a suspended ceiling you can use the semi-recessed version - Voyager Elite R, or the recessed diffuser version Voyager Elite ID, providing a sleek integrated look into the ceiling.
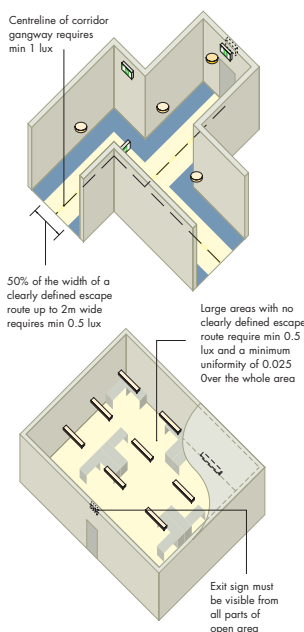

For directing people along the escape route simply take the matching exit sign versions Voyager Elite X, Voyager Elite XR or Voyager Elite IDX. If you would prefer a hanging exit sign chose Voyager Elite SX.

Other typical open space applications with the same needs are offices, conference rooms, hotel lobbies, restaurants, shops, cinemas and many more.

Escape Route Lighting

Emergency lighting of Escape Routes has to provide sufficient light to guide people to safety (1 lux minimum according to European standards)

Centreline of corridor gangway requires min 1 lux

50% of the width of a clearly defined escape route up to 2m wide requires min 0.5 lux

Large areas with no clearly defined escape route require min 0.5 lux and a minimum uniformity of 0.025 Over the whole area

Exit sign must be visible from all parts of open area

In times of emergency it is important for people to be able to see the way out and to ensure that fire fighting and safety equipment can be easily located and used.

Let us for example have a look at a corridor of a hotel building. Changes in levels and direction, each door intended to be used in an emergency, emergency exits and safety signs, each intersection of the corridor itself, the first aid posts, fire fighting equipment and fire alarm call points, the area outside the final exit door: all of these areas and many more have to be considered when planning the emergency lighting.

How to use Voyager Elite:
For escape route signage we recommend using the exit sign blade versions of Voyager Elite either the surface mounted Voyager Elite X, the semi-recessed Voyager Elite XR or the recessed Voyager Elite IDX, all of them incorporating an additional diffuser to suit your requirements.

Alternatively take the recessed Voyager IX and the exit sign Voyager Elite SX, suspended with either wires or rods. If you need a wall mounted exit sign choose Voyager Elite SX together with cantilever brackets.

For illumination use the diffuser versions of Voyager Elite, either the surface mounted Voyager Elite, the semi-recessed Voyager Elite R, or the recessed Voyager Elite ID, each providing a comfortable light.
For the area outside the final exit door the bulkhead Voyager Elite provides an excellent solution due to its IP65 protection.

You will find escape routes in other applications as well, for example in office buildings, schools and the staircases and corridors of all buildings in general.

Excellent optical performance

## Optimised to offer outstanding spacing performance in the emergency mode

This means that for a typical corridor (2m wide and 3m high) luminaires are spaced at 9.6m, if you use the basic emergency version of Voyager Elite or Voyager Elite X, and at 10.9m if you use a SelfTest or addressable test version. Only two luminaires are needed for a typical 19m corridor, saving you the installation costs of two extra luminaires compared to using a lower performance luminaire. This represents an overall cost saving of 50% - materials and labour.

Spacing table for escape routes (1 lux)

	"x" wall to luminaire		"y" between luminaires	
Mounting height	E3M	E3T, E3X	E3M	E3T, E3X
2.5m	3.3	3.7	9.7	10.8
3m	3	3.5	9.6	10.9
3.5	2.75	3.2	9.3	10.6

E3M = basic emergency, E3T = SelfTest, E3X = addressable test

Spacing table for open areas (0.5 lux)

	"a" wall to luminaire		"b" between luminaires transverse		"c" between luminaires axial	
Mounting height	E3M	E3T, E3X	E3M	E3T, E3X	E3M	E3T, E3X
2.5m	2.7	2.8	9.7	10.4	7.5	7.1
3m	2.65	2.9	10.1	10.8	7.9	7.6
3.5m	2.6	2.9	10.4	11	8.1	8

E3M = basic emergency, E3T = SelfTest, E3X = addressable test

Family style range of products

Unique oval design for emergency lighting

The product design of the Voyager Elite family is based on a simple oval shape. This provides a unique alternative to the traditional rectangular emergency lighting in today's market.

The design detail, which runs through the entire Voyager Elite range, presents an aesthetic benefit; hence you will find the ellipsoidal shape of the bulkhead reflected in the endcaps of the hanging exit sign.

Making life easy

SelfTest and Addressable test versions of Voyager Elite eliminate the need for expensive and time consuming manual testing

Just like fire protection systems, emergency lighting is potentially life saving but worthless and hazardous if the equipment is not properly maintained. As a consequence there are increasingly stringent legal requirements to regularly inspect, test and maintain emergency lighting in workplaces or public buildings.

Explorer, the Thorn Lighting Emergency Test product range, provides automated testing of emergency luminaires that is fully compliant with European Standards. This offers complete peace of mind and safety without the need for costly and time consuming manual testing by a competent person, which is required for the basic emergency range version of Voyager Elite. Explorer has been designed with three options to suit varying requirements and budgets.

Explorer SelfTest

SelfTest has an integral diagnostic microprocessor contained within an emergency luminaire, e.g. Voyager Elite. A bi-colour LED integrated in the luminaire indicates status as it monitors and automatically tests its emergency functions at intervals compliant with legislation. Easy to install and requiring no additional cabling, Explorer SelfTest provides simple and reliable standalone automatic testing, eliminating the need for costly manual testing by a competent person.
Explorer Project

An addressable testing system, providing fully automatic monitoring, testing and fault logging for emergency luminaries like Voyager Elite, using Explorer Project XP128 Controller. Explorer Project's addressable fault reporting capabilities eliminate the need for visual inspection. This offers a highly convenient and fully programmable solution that is ideal for small and medium sized projects of up to 128 luminaires (or when using Explorer Project XPX64 Extenders, up to 256 luminaires can be controlled). The system works by periodically and automatically testing the emergency luminaires for working efficiency. The tests are centrally recorded and any faults are logged. These can then be printed (using the handheld Explorer Project XPPRI Printer) or, if the optional Explorer Project XPGSM module is installed, faults can also be reported via an SMS text message to a mobile phone. Fault reports identify the luminaire concerned and the type of fault (lamp, battery or emergency interface), allowing swift location and repair.
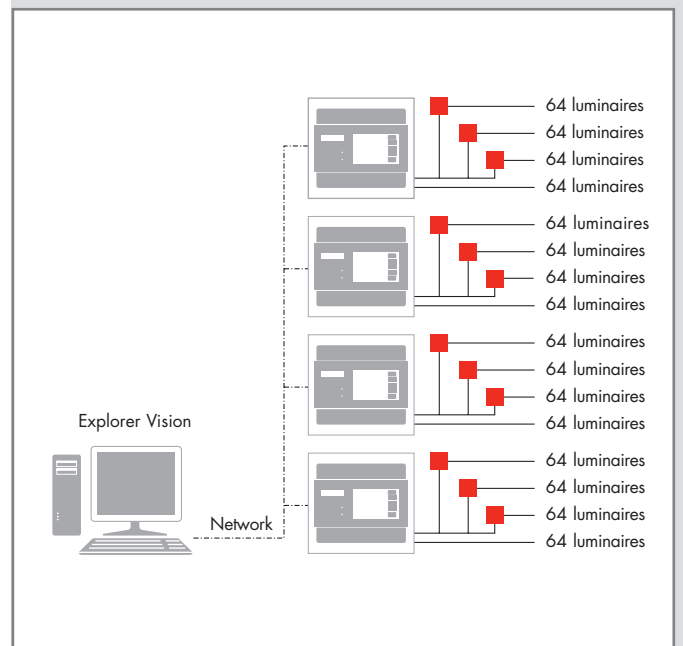

Explorer Vision

A programmable addressable testing system for emergency lighting, which allows tests to be run automatically or manually using a central PC with monitoring software. Faults are logged and recorded and fault reports can then be printed, emailed or faxed. An ideal solution for larger projects, eliminating the need for visual inspection and maintenance walks.

X - E3M, Y - E3T & E3X

- Surface mounted and semi-recessed versions available to suit different schemes
- Designed for simple wiring and quick and easy installation
- IP65 protection
- Suitable for interior and exterior applications, especially commercial, retail, hotel and leisure, escape routes and open areas

Lamps
11W TC-SEL (FSD)
Cap: 2G7

Materials/Finish
Body: polycarbonate silver (RAL 9006) or white (RAL 9010)
Diffuser: clear polycarbonate

Installation/Mounting
Oval cut-out for ceiling, template provided, provision for 20mm rear cable entry. European back box mounting options e.g. BESA fixing and recessed ceiling box mounting. Four/six way terminal block 2 x 2.5mm² capacity. Semi-recessed version: Oval trim hides oval cut out in ceiling.

Standards
Designed and manufactured to comply with EN60598.2.22 EN61547 and EN55015
850°C Fire retardant
Ta -5 - 25°C
Class I Electrical
IP65
CE

Specification
To specify state: Stylish silver/ white high performance 3 hour duration maintained emergency bulkhead for 11W TC-SEL compact fluorescent lamps with manual, self or addressable testing capabilities. As Thorn Voyager Elite and Elite R.

Voyager Elite R - semi-recessed

Voyager Elite X
Voyager Elite XR

A stylish double-sided emergency exit sign to complement the Elite bulkhead, with surface mounted and semi-recessed versions and automatic testing capabilities

Spacing table Open Area (min 0.5 lux)

Mounting height	wall to luminaire		between luminaires transverse		between luminaires axial
