HiPak – the next generation

With high performance and excellent efficiency, meet Thorn's fourth generation high bay for industrial applications.

The latest generation of the HiPak high bay is a highly efficient one-for-one replacement for conventional industrial luminaires. But with an efficacy of up to 181 lm/W and a 100,000 hour extended lifetime – it promises the quickest payback than ever before.

With a choice of three sizes and six lumen outputs up to 35,000 lm, the next generation of HiPak is a solid option for refurbishment and retrofit projects. Its perfectly crafted optics and refractor accessories also mean that HiPak can just as easily be used in retail applications where appearance and visual comfort are essential, as well as logistics, manufacturing or warehouse facilities. This is thanks to its durability, connectivity and flexibility.

HiPak can also provide advanced energy savings through a range of control options. HiPak offers both microwave and passive infrared sensors and works seamlessly with a range of basicDIM Bluetooth wireless control options.

Felix Breuss, Product Manager for Protected Luminaires at Zumtobel Group said, *"We're really pleased to launch the latest generation of HiPak. This premium performance high bay can transform industrial spaces and produce energy and cost savings that haven't been easily achievable in the past. Manufacturing and logistics facilities are usually large and open spaces that require high levels of illumination, and their installation can be costly due to the supply of power cables needed. Thanks to HiPak's wide beam optics, exceptional light coverage, uniformity and simple installation is ensured.*

"My thanks go out to the project team, and project leader Salim Akram especially, for their passion and dedication in creating this latest generation of HiPak and their desire to develop world class luminaires."
